Question ?

silabus

- Bahasa C
- Algoritma

What is c ?

- C is an **ideal language** with which to **learn programming**,
- C is a very **compact language**, so there isn't a lot of syntax to learn before you can write real applications,
- C Is used for programming at **all levels**, from device drivers, microcontroller and operating system components to large-scale applications,
- Programming in C **isn't difficult**,

How to learn programming ?

- First, there *is* quite a lot to learn, but this means you'll gain a greater sense of satisfaction when you've mastered it,
- It's great fun, so you really will enjoy it,
- Learn programming by doing it,
- It's much easier than you think, so you positively *can* do it.
- Find more references : books, e-books, internet

tools

- C compiler and library installed so that you can execute the examples,
- Program text editor for preparing your source code files,
- IDE : Borland C++, DevCpp

Question ?

How to program in c

- Editing
- Compiling
- Linking
- Executing

Editing

- Creating and Modifying **source code**,
- Tools : Notepad or IDE (Integrated Development Environment),
- IDE : Borland C++ -> Editing, Managing, Developing
- File extension : **.c**
- See sample

Compiling

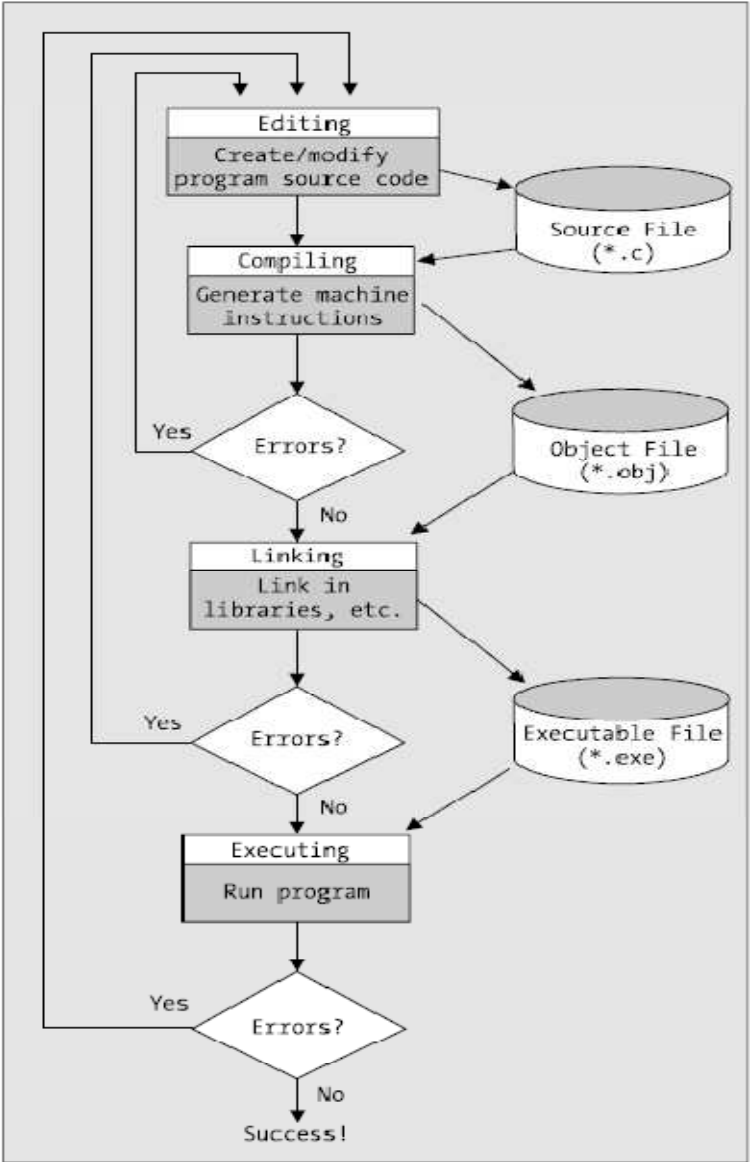

- Compiler convert source code to machine language, detect and report error in the compilation process,
- The output from the compiler is known as object code and is stored in files called object filesLinking,
- Extension : **.obj** (Microsoft Windows)
- See sample

linking

- The linker combines the various modules generated by the compiler from source code files,
- The set of source files that make up the program will usually be integrated under a **project name** (Managing by IDE),
- A failure during the linking phase means that once again you have to go back and edit your source code,
- Extension (if success) : **.exe** (Microsoft

Executing

- Running **.exe**

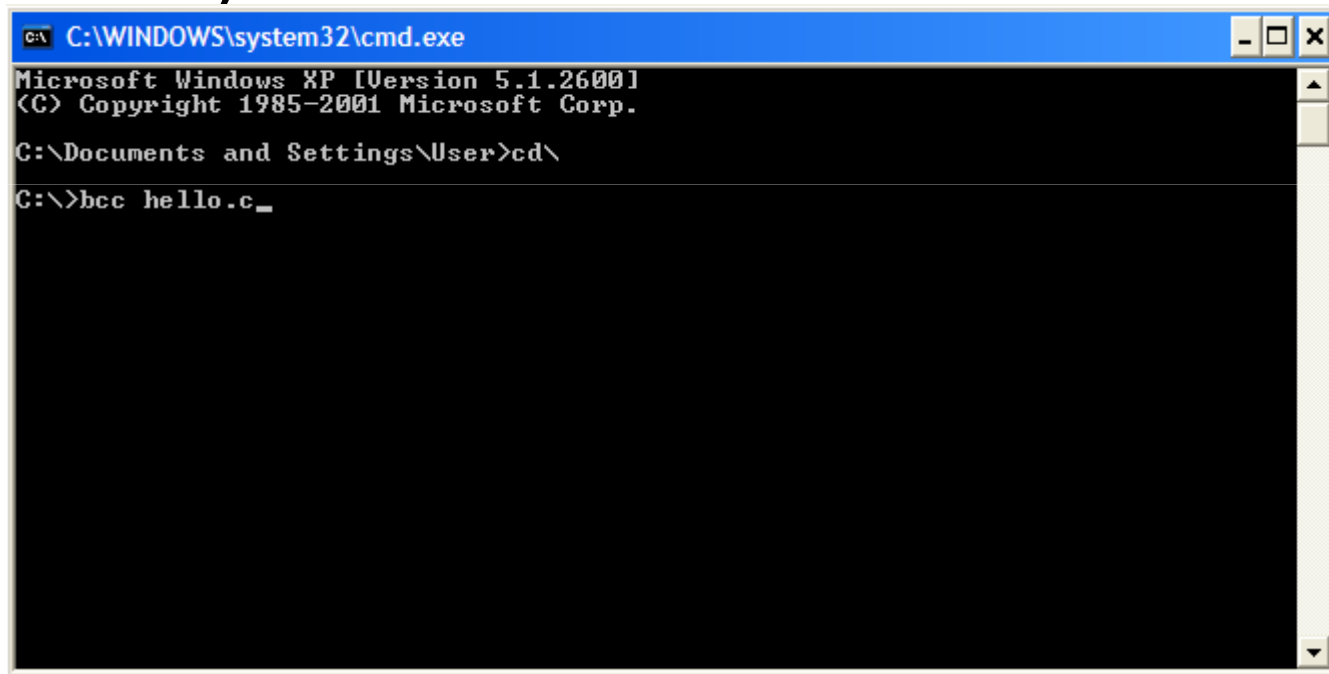

Let's try

- Editing
 - Open Notepad
 - Save as hello.c

```
#include <stdio.h>
main() {
    printf("Programming is Easy!");
    getch();
}
```

Compiling and linking

- Open Command Prompt (Borland C++ was installed)

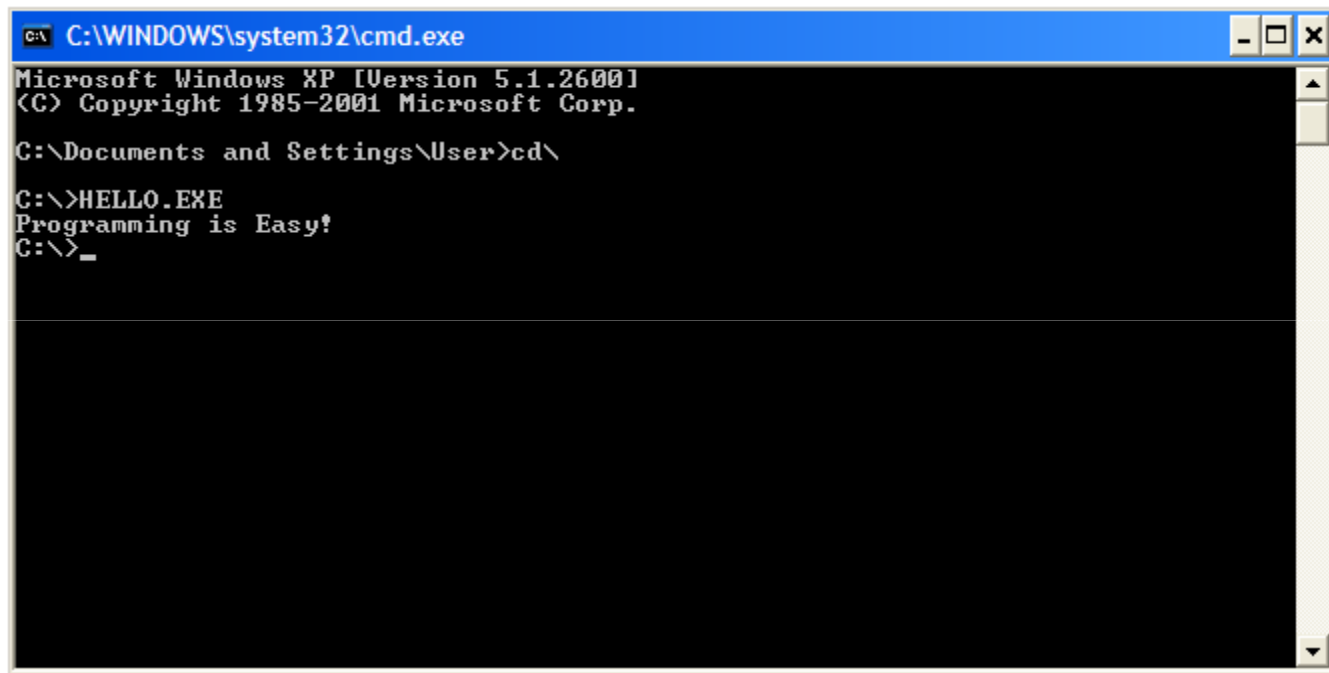

```
C:\WINDOWS\system32\cmd.exe
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

C:\Documents and Settings\User>cd\

C:\>bcc hello.c_
```

executing

```
C:\WINDOWS\system32\cmd.exe
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

C:\Documents and Settings\User>cd\

C:\>HELLO.EXE
Programming is Easy!
C:\>_
```
